

## **Polar Conduction**

Metals on the vehicle need protection or buffering from the effects of salt and brine. Corrosion FREE bonds with the metal through its unique polarity. A light coating is required, over application offers no benefits. Oxygen and water cannot penetrate this bond, rust and corrosion stop.

Our technology surpasses simply coating the metal, it bonds, creating a new surface of protection. That is why Corrosion Free rustproofing creeps into new areas that it has not bonded with. Like a magnet to steel, will not drip and stays soft.
